**Climate and
environmental
policy**

Climate and environmental policy

It is the policy of the group, that we have a shared responsibility to protect our climate and act in a sustainable manner.

We are aware of the risks of contributing unduly to climate change and compromising the ability of future generations to meet their own needs, through our operations and business model.

Therefore, we will act with due diligence in reducing our own negative impacts, but also as a group, act in accordance with our role in mitigating climate change and the conservation of natural resources at both customers and those suppliers on which control can be enacted.

Policy statements

We will live up to our policy by:

1. Demonstrating environmental vigilance by designing and manufacturing solutions that retain the highest possible value after their end-of-life
2. Actively engaging with customers and suppliers in lowering CO₂e emissions by using both existing technologies and by developing new within digitalization and automatization with improved efficiency
3. Continuously working to reduce environmental impacts from own processes and apply due diligence in environmental-related questions
4. Striving to ensure continuous improvement throughout our management system and the processes within to enhance environmental performance.
